Summary

AI Full-Stack Software Developer and Computer Science graduate with close to a year and a half of hands on development experience across contract engineering roles and independent ventures. Delivered Listen, a real time AI system for Pakistan Sign Language recognition achieving 98.16% accuracy, graded Gold, the highest tier, by independent AI judges through the Kanz AI initiative, a program that separately set a Guinness World Records title for the most participants in an AI training session. Skilled across the stack: REST API design, SQL/NoSQL databases, CI/CD deployment, containerization, and applied Python machine learning, with growing hands on experience in RAG, LangChain, LangGraph, and agentic AI workflows.

Education

Bahria University

Bachelor of Science in Computer Science

Sep 2022 – May 2026

Lahore, Pakistan

Technical Skills

Languages: JavaScript, TypeScript, Python, C++, SQL, HTML5/CSS3

Frameworks & Libraries: MERN Stack (MongoDB, Express.js, React.js, Node.js), Next.js, Redux, Tailwind CSS, FastAPI, RESTful APIs, Flutter, Kubernetes, WebSockets, Flutter, JWT, RBAC

Databases & DevOps: PostgreSQL, MySQL, Supabase, Neon, Sequelize ORM, Docker, CI/CD, Vercel, Railway, Git/GitHub

AI & ML: TensorFlow, TFLite, MediaPipe, Computer Vision, Scikit-learn, XGBoost, Numpy, Hugging Face, OpenAI API, Claude

Agentic AI: RAG, LangChain, LangGraph, MCP, AI Agents, n8n, RLHF, SFT, Prompt Engineering

Methodologies: Agile / Scrum, Code Reviews, Full-Stack Development, Cross-Functional Collaboration

Experience

Turing

Dec 2025 – Present

Software Engineer, AI/ML Training & Evaluation (Contract)

United States, Remote

- Led and mentored a 5-person AI trainer team, improving scoring consistency through evaluation guidelines and structured onboarding. Contributed to human-in-the-loop feedback and structured evaluation of LLM outputs
- Delivered Python backend connectors replicating SaaS tools like Slack and Jira, validated through Docker based test suites, supporting a frontier AI lab's agent capability initiative at Turing.
- Improved LLM response quality by fine-tuning frontier models through RLHF and SFT, and validated output through side by side evaluations, maintaining a perfect 5/5 quality score across all evaluation dimensions.

Wamo Labs

Oct 2025 – Jan 2026

MERN Stack Developer Intern

Lahore, Pakistan

- Shipped full-stack features across the MERN stack (MongoDB, Express.js, React, Node.js) inside an existing production codebase, using Git version control and CI/CD deploys.
- Engineered 10+ REST APIs with JWT-based authentication and role-based access control (RBAC) to support different user roles; contributed to sprint planning and code reviews in the team's Agile process.

Alfannar Projects

Jun 2025 – Sep 2025

Full-Stack & Machine Learning Intern

Riyadh, KSA

- Developed a six-page Streamlit app comparing Random Forest, XGBoost, and CatBoost classifiers (SMOTE-balanced) on enterprise clinical data to flag antibiotic-prescription mismatches, auto-selecting the best model by F1 score at 95% accuracy.
- Architected a financial modeling dashboard (Next.js, FastAPI) parsing an 85,569-field Excel model into automated monthly timelines, plus an AI analyst panel using Hugging Face's Qwen2.5-7B-Instruct for investment narratives from a custom scoring engine.

Projects

Listen — Real-Time Pakistan Sign Language Recognition (Final Year Project)

2025 – 2026

Python, TensorFlow, FastAPI, Flutter, MediaPipe, PostgreSQL | [GitHub](#) | [Kanz AI Portfolio](#)

- Engineered as part of a 3-member team: a Flutter app streams camera frames over WebSocket to a FastAPI server (deployed on Railway) running a Conv1D + BiLSTM + Attention TFLite model with MediaPipe and Neon PostgreSQL.
- Achieved 98.16% top-1 accuracy on 64 PSL word classes with sub-200ms end-to-end latency, EMA smoothing, and a finite-state-machine commit pipeline; earned an A grade academically and graded Gold, the highest tier, by independent AI judges through Kanz AI.

Zero Limit Apparel — Full-Stack E-Commerce Platform (Founder)

2024 – Present

Next.js, Node.js, TypeScript, MongoDB, Vercel | [zero-limit.vercel.app](#)

- Founded and built a live production e-commerce platform (own brand, real customers) with a Node.js/Next.js backend, product catalog, cart, secure checkout, and Meta Pixel conversion tracking.
- Reduced initial load times by 40% through Next.js image optimization and code-splitting, reaching a Lighthouse performance score of 90+; deployed on Vercel with automated CI/CD pipelines.

Ticket Management System — Multi-Role Workflow Platform (Architecture Practice)

2026

Next.js, Node.js, Express.js, PostgreSQL, Sequelize ORM | [GitHub](#)

- Designed a production-style, microservices-oriented backend with 10+ RESTful APIs (routers, controllers, middleware, Sequelize ORM), a self-directed evaluation project mirroring the architecture used at Wamo Labs.

Certifications

AWS Architecture Job Simulation

Forage, 2025

Machine Learning with Python

IBM, 2024

Oracle Agentic AI Foundations

Oracle, 2026

Full-Stack Web Development

DevTown, 2024

Kanz AI Hackathon (Gold Rating)

Kanz / LAU ACE, 2026
